

Claude Code Commands & Skills Reference

Studex Global Markets Platform

Version: 2.0.0 | Updated: 2026-04-06

Part 1: Built-in Claude Code Commands

Session & Navigation

Command	Description
<code>/help</code>	Show help and available commands
<code>/clear</code>	Clear conversation history
<code>/compact</code>	Compress conversation to save context window
<code>/fast</code>	Toggle fast mode (same model, faster output)
<code>/quit</code> or <code>/exit</code>	End the Claude Code session
<code>/status</code>	Show current session status

Development Tools

Command	Description
<code>/init</code>	Initialize Claude Code in a new project
<code>/commit</code>	Create a git commit with AI-generated message
<code>/review-pr</code>	Review a pull request
<code>/simplify</code>	Review changed code for reuse, quality, and efficiency

Configuration

Command	Description
<code>/config</code>	View/edit Claude Code configuration

Command	Description
<code>/mcp</code>	Manage MCP (Model Context Protocol) servers
<code>/permissions</code>	Manage tool permissions
<code>/keybindings</code>	Customize keyboard shortcuts
<code>/update-config</code>	Configure Claude Code settings.json

Advanced

Command	Description
<code>/loop <interval> <command></code>	Run a command on recurring interval (e.g., <code>/loop 5m /commit</code>)
<code>/schedule</code>	Create/manage scheduled remote agents on cron

Part 2: Superpowers Skills (14 Skills)

Collaboration Skills

Skill	How to Invoke	What It Does
Brainstorming	<code>/brainstorm</code>	Refine ideas through questions before coding
Writing Plans	<code>/write-plan</code>	Break designs into 2-5 min tasks with file paths
Executing Plans	<code>/execute-plan</code>	Execute plan tasks systematically
Parallel Agents	<code>superpowers:dispatching-parallel-agents</code>	Spin up fresh sub-agents per task
Subagent Dev	<code>superpowers:subagent-driven-development</code>	Coordinate sub-agents with two-stage review
Request Review	<code>superpowers:requesting-code-review</code>	Review work against the plan
Receive Review	<code>superpowers:receiving-code-review</code>	Handle incoming review feedback
Finish Branch	<code>superpowers:finishing-a-development-branch</code>	Verify tests, merge/PR, clean up

Testing & Quality Skills

Skill	How to Invoke	What It Does
TDD	<code>superpowers:test-driven-development</code>	Strict RED-GREEN-REFACTOR cycles
Debugging	<code>superpowers:systematic-debugging</code>	Root cause analysis with evidence
Verification	<code>superpowers:verification-before-completion</code>	Final checks before declaring done

Workflow Skills

Skill	How to Invoke	What It Does
Git Worktrees	<code>superpowers:using-git-worktrees</code>	Create isolated workspaces on new branches
Using Superpowers	<code>superpowers:using-superpowers</code>	How the agent prioritizes skills
Writing Skills	<code>superpowers:writing-skills</code>	Guide for creating new skills

Part 3: DenchClaw Skills (4 Categories)

Prerequisite: Run `npx denchclaw@latest` for the web UI at `localhost:3100`

Skill	How to Invoke	What It Does
CRM	<code>denchclaw:crm</code>	Manage contacts, deals, companies via DuckDB with kanban/calendar/timeline views
App Builder	<code>denchclaw:app-builder</code>	Create sandboxed web apps with React/TSX, bridge API for AI, webhooks, cron
Browser	<code>denchclaw:browser</code>	Automate Chromium browser with your existing auth state
GStack	<code>denchclaw:gstack</code>	Sprint workflow: Think → Plan → Build → Review → Test → Ship → Reflect

GStack AI Specialist Roles

When you invoke `denchclaw:gstack`, it simulates 18 specialist roles: - YC Office Hours, CEO/Founder, Eng Manager, Designer, Staff Engineer - QA Lead, Release Engineer, SRE,

and more - Each role handles its domain automatically — you act as CTO overseeing the AI team

DenchClaw Sub-Skills

Sub-skill	Parent	What It Does
gstack:ship	GStack	Ship the current sprint
gstack:review	GStack	Code review phase
gstack:qa	GStack	Quality assurance testing
gstack:investigate	GStack	Deep dive investigation
gstack:design-review	GStack	UI/UX design review
gstack:retro	GStack	Sprint retrospective
gstack:freeze / unfreeze	GStack	Code freeze management
gstack:canary	GStack	Canary deployment
gstack:guard	GStack	Guard rails and checks
gstack:benchmark	GStack	Performance benchmarks

Part 4: Claude-Mem Skills (5 Skills)

Memory is captured automatically. These skills query it.

Skill	How to Invoke	What It Does
Memory Search	/mem-search	Query past sessions with natural language
Do	claude-mem:do	Execute memory-aware actions
Make Plan	claude-mem:make-plan	Create plans informed by historical context
Smart Explore	claude-mem:smart-explore	Explore codebase with memory-augmented search
Timeline Report	claude-mem:timeline-report	Generate chronological activity reports

Memory Search: Progressive Disclosure

- 1. **Search** → Returns compact index with IDs (~50-100 tokens)
- 2. **Timeline** → Chronological context around results
- 3. **Get_observations** → Full details only for IDs you care about

4. Result: ~10x token savings vs. dumping everything

Web UI

Access real-time memory stream at `http://localhost:37777`

Part 5: YouTube Transcription & Analysis

Skill	How to Invoke	What It Does
Transcribe	<code>/transcribe <URL></code>	Transcribe YouTube video or audio file

Supported Inputs

- YouTube URLs
- Direct audio files (.m4a, .mp3, .wav)
- VTT subtitle files
- Any yt-dlp supported platform (Vimeo, Twitch, etc.)

Dependencies Required

```
yt-dlp      - Video downloading
ffmpeg      - Audio extraction
whisper.cpp - Local speech-to-text (no API key needed)
```

Part 6: MCP Token Optimization

Reference when sessions run slow or costs are high.

Quick Rules

1. Only enable MCP servers needed for current task
2. Use Read/Grep/Glob instead of Bash for file operations
3. Request specific data, not broad queries
4. Delegate research to sub-agents to protect main context
5. Use progressive disclosure (claude-mem's 3-layer search)
6. Batch related operations into single tool calls

Part 7: Deapi AI Skills Marketplace

Additional AI capabilities from the Deapi skills collection.

Capability	Description
Transcription	YouTube and audio transcription
Image Generation	AI image creation
Text-to-Speech	Convert text to audio
OCR	Extract text from images

Part 8: Studex Platform Skills (Custom)

#	Skill	Status	Category
1	Marketing Skill App	Implemented	AI Marketing Automation
2	Google Stitch Skill	Implementing	Data Integration
3	Auth & User Management	Implemented	Core Platform
4	Deal Pipeline	Implemented	Core Platform
5	Real-Time Messaging	Implemented	Core Platform
6	KYC Verification	Implemented	Compliance
7	Analytics & Reporting	Implemented	Marketing Intelligence
8	Content Generation	Implemented	AI Content Creation
9	Competitor Research	Planned (Phase 3)	Marketing Intelligence
10	Hook Performance	Implemented	Marketing Optimization
11	Multi-Platform Distribution	Implemented	Content Distribution
12	BMAD Consulting	Implemented	Project Planning

Quick Reference: Most Used Commands

Task	Command
Start a new feature	<code>/brainstorm</code> → <code>/write-plan</code> → <code>/execute-plan</code>

Task	Command
Debug a problem	<code>superpowers:systematic-debugging</code>
Search past work	<code>/mem-search "what did we do with auth?"</code>
Transcribe a video	<code>/transcribe https://youtube.com/watch?v=...</code>
Manage deals/contacts	<code>denchclaw:crm</code>
Build internal tool	<code>denchclaw:app-builder</code>
Run as CTO	<code>denchclaw:gstack</code>
Optimize slow session	Reference <code>mcp-token-optimization</code>
Create git commit	<code>/commit</code>
Review a PR	<code>/review-pr <number></code>
Simplify code	<code>/simplify</code>

Generated for Studex Global Markets — All skills installed at `.claude/skills/` Run `git submodule update --init --recursive` after cloning to initialize skill repos.
